

RAYBURN REGENT Cooker

Regd. Trade Mark

With External Riddling Bottomgrate

Patent Nos 505458 & 666804

Brick Replacement Instructions

Right Hand Oven Model. With Boiler

Instructions for replacement of a complete set of Fire Bricks:

Lift off the Hotplate, no unscrewing being necessary. Remove the Bottomgrate and frame. Slide the catch which secures No. 322 Front Top Brick and remove the Bricks in order of numbering down to No. 317.

To assemble replacements into Cooker, the order is reversed, starting with No. 317, until No. 322 is in position. Make secure by moving metal catch back again. Replace the Bottomgrate and frame.

Make good all joints with Fire Cement.

When replacing the Hotplate, see that the Asbestos Sealing Rope is in its original position.

Instructions for replacement of bottom Fire Bricks only:

Lift off the Hotplate. Remove the Bottomgrate and frame. Clear cement away from joints between bricks to be replaced and those adjoining including boiler.

Take hold of rear of No. 318 brick and, with one hand pressing against brick immediately above, lever the bottom brick towards centre of firebox until it clears the front brick, then lift through opening in hob. Remove No. 319 brick opposite in the same manner. No. 317 front brick can now be taken out. Replace in the reverse order, starting with front brick. See that the asbestos pad is placed between this brick and front of Cooker. All joints to be lined with a liberal supply of prepared fire cement, making sure that each brick is pressed into position. Finally, clean off any surplus cement with a damp cloth and return the Hotplate to its seating on the hob. Replacement of bottom fire bricks can be effected without disturbing the other bricks.
